# FREE OFFICE CHAIR AUDIT\*

**Do You Know How Bad Some of Your Ergonomic Chairs REALLY Are?**

- ? Faulty gas lifts?
- ? Catching wheels?
- ? Foam lost its support?
- ? Backrest doesn't hold?
- ? Mechanism worn out?

**We Audit the 12 Critical Elements of Your Office Chairs and Report Back to You**

Chairs in an organization are often overlooked. But many workplaces have faulty chairs that are old, worn or broken and are steadily straining employees and putting them at risk of injury.

Our in-house ergonomic expert has developed a series of 12 important checks of the ergonomic and operational aspects that any office chair should go through every few years.

Perform Ergonomics provides a FREE\* and OBLIGATION FREE audit of your fleet of ergonomic chairs. We will inspect and test your chairs and provide you with a report listing each chair's condition and priority for retention or replacement. We classify the chairs into 7 categories from "Excellent" condition to those that suitable for "Repair" and those that meet the "Condemn" criteria (i.e. no longer suitable for the health and safety of your workforce).

A report is then submitted to you with prioritised recommendations, including suggestions for suitable replacement chairs (at no obligation).

The Perform Ergonomics Free Office Chair Audit enables you to be sure you have a fleet of safe and sound ergonomic chairs. A good fleet of office chairs increases productivity while reducing the incidence of workstation injury.

[\*Free Chair Audits by Perform Ergonomics are available in Tasmania only]
